

## Need to adapt to new business demands?

## While Planning for Growth

### **Register Today**

With budgets tight, it's increasingly difficult to justify any new IT infrastructure investments (CAPEX) that are unable to yield a rapid ROI. In today's economic climate, both server and storage virtualisation can immediately help reduce operational expenditures significantly, enabling you to quickly recover the investment even in the face of uncertain revenues.

Attend a complimentary technical workshop to discuss how the Dell EqualLogic™ PS Series virtualised iSCSI SANs integrate directly with VMware® vSphere4 deployed on Dell PowerEdge™ servers to help reduce the cost and complexity of architecting your IT infrastructure.

### **Attend this workshop to learn new strategies for:**

- Building simple, cost effective virtual server and storage infrastructures
- Using automation for managing & protecting server workloads, applications and datasets
- Achieving operational efficiencies through tightly integrated, standards based data center solutions

### **The Synapse Advantage:**

Synapse have been offering virtual technology solutions since 1999, with customers both on and off the island including, Clerical medical Europe, Halifax Bank of Scotland and Fairbairn Private Bank.

Our virtualisation technology partners include best of breed technology from VMware, Dell and Microsoft.

If you would like to register for one of the workshops please email [equallogic@synapsecn.com](mailto:equallogic@synapsecn.com) indicating your preferred date and time or alternatively Contact **Matt James** or **Steve Douglas** on **675000**.

If you feel you have received this email in error please let us know.

### **WORKSHOP**
